Section

We would like to thank all of our customers for their continued business. It is your encouragement that contributes to the phenomenal growth and demand for Metallife and our exclusive Thermallife process. Now we have your company covered for the 4 most common modes of your die failure - Thermal Fatigue Heat Checking, Washout, Erosion, and now through Thermallife - solder protection.

Since 1994, Badger has been publishing our newsletter relating to our processes, die materials and associated topics. These newsletters are all available on our website:

All Badger
Newsletters

Since our newsletter creation we have covered many topics relating to die casting and die materials.

In one issue, we discussed how to make sure that your tooling reaches us in a good condition.

June 1997
Newsletter

For your convenience we are recapping the high points contained in this 1997 newsletter.

Click on the sidebar buttons to view the information applicable to the topic.

Is there a way to have Internet Explorer open as a maximized window?

If you are like most web users, it can be extremely annoying to constantly have to maximize a new window in Internet Explorer.

If you would like to have your window open in a maximized full screen size. There are two ways to accomplish this.

1. You can download and install a small program which is available on our website and free. [Windows Maximizer 2.3 400K in size.](#) ([find out more](#))

Or to do it without a program:

1. Open IE and then open a new window by selecting a link and right clicking
2. Size the new window to the size you want.
3. Hold the Shift key and close the window using the X icon (upper right).
4. Set the remaining window to the desired size.
5. Again hold the Shift key and close this window using the X icon.

Sometimes Windows will forget these settings at which point you will need to repeat the process
